PM's Employment Generation Programme aims to create over 4 lakh jobs in 2016-17

New Delhi : Government has said that more than four lakh Jobs will be generated under Prime Minister's Employment Generation Programme (PMEGP) during 2016-17. Minister of Micro, Small and Medium Enterprises Mr Kalraj Mishra informed, that a sum of Rs 1,139 crore will be utilized during the next financial year under PMEGP to assist 55 thousand projects with Margin Money. Briefing about the roadmap and budget allocation in New Delhi yesterday, the Minister said, this will generate employment for more than twentyfive thousand persons.

Financial inclusion, skill development initiatives to empower Nari Shakti: PM

New Delhi : On International Women's Day, Prime Minister Shri. Narendra Modi has saluted the accomplishments of all women expressing gratitude for their indispensable role in our society.

In a message, he said, the initiatives taken by his Government like 'Beti Bachao, Beti Padhao' in its efforts towards women-led development are unwavering. Mr. Modi said, the NDA government's financial inclusion efforts, skill development initiatives and MUDRA Bank will empower our Nari Shakti to contribute to India's growth.

The Minister said, Khadi production is expected to reach Rs 1300 crore during this fiscal year, generating employment for more than 19 lakh persons. Mr Mishra said, Rs 341 crore has been earmarked for Khadi and Village Industries Commission.

He also said that to promote entrepreneurship skills among the next generation, his Ministry has proposed to give Entrepreneurship Education and Training through Massive Open Online Courses. This Training will be provided in 2,200 colleges, 300 schools, 500 Government and 50 Vocational Training Centres .

Aedes aegypti female mosquito, which is available in all Islands of Lakshadweep, is responsible for transmission of Zika Virus, Dengue, Chikungunya and yellow fever

Health indices in Lakshadweep are above national average, administration has been incurring a huge expenditure on health, many other health ratios are appreciably better etc does not ensure healthy individuals in Islands. Health, as WHO definition goes, does not mean the absence of illness or infirmity but a state of complete physical, mental and social well being. Mere cliché of words like "lifestyle changes", "behavioural modification" etc alone will not suffice but there shall be a regular and uninterrupted action plan to improve health care infrastructure and public health activities so as to curtail both communicable and non communicable diseases before it becomes too late. The vector borne diseases including the recent Zika pandemic in the perspective of Lakshadweep and number of lacunae yet to be tackled with some innovative solutions are discussed in this article.

Universally there is a paradigm shift in the prevalence of diseases from communicable to non communicable resulting the total forgo of communicable diseases in recent years in Lakshadweep like vector borne diseases such as Dengue, Chikungunya, filariasis, malaria to name a few. As a result the diseases once thought to be conquered are fighting back with renewed ferocity. Chikungunya outbreak in 2006-07 in almost all the Islands of Lakshadweep and recent reporting of increased Dengue cases in some pockets of Minicoy, Kavaratti and Amini Islands are the case in point. The diseases like polio, mumps, tetanus, whooping cough etc are under control and so far not emerged in dangerous proportion. Thanks to 100% vaccination in Lakshadweep Islands which remind us the famous adage "Prevention is better than cure".

In the absence of disease transmitting vectors like sand fly, Tsetse fly, black fly etc in Lakshadweep Islands, mosquitoes of different types are the only vectors transmitting the diseases. Complete eradication of mosquitoes, as we all agree, is just not possible. In the evolutionary ladder mosquito exists on the earth even before man took his position. Insecticidal resistance is a widely accepted phenomenon. Only solution against this two winged nuisance is to reduce its

critical density or trim down the man-vector contact. Killing of the adult mosquitoes infected with virus through fogging is the solution adopted only at the time of any outbreak/epidemic so as to bring an abrupt halt to the ongoing transmission. In real sense it is a "Band Aid" method. But plugging the sources of breeding of vectors is a feasible solution to go a long way to control this menace. To understand destroy or removal of breeding sources of mosquitoes, knowing about a petite of behavioural pattern of various species of mosquitoes are crucial for the interest of the man in the street. In Lakshadweep we have three species of mosquitoes incriminated as vectors. Firstly, Aedes Species commonly called tiger mosquito due to its resemblances of its symmetrically arranged black and white dots on its legs and other parts of the body to that of a Tiger. Various species of this mosquitoes – Aedes albopictus and Aedes aegypti, which are available in plenty, in all Islands and are responsible for transmission of Dengue/ Dengue Haemorrhagic Fever, Chikungunya, Yellow fever, Zika Fever etc. This is a day biter and breeds only in fresh water. We had a severe outbreak of Chikungunya only during 2006-07 for the first time in Lakshadweep. Secondly, Anopheles Species, again a fresh water breeder, is responsible for transmission of malaria. Usually, we have only less than 10 imported cases of malaria every year. Thirdly, Culex Species, which breeds in dirty water and is responsible for transmission of Lymphatic Filariasis in Lakshadweep. Due to continuous efforts we are on the verge of elimination of filariasis as envisaged in the National Health Policy.

Dengue per se is not dangerous when we call it as Classic Dengue Fever, which is self limiting. But when infected with more than one virus, the first one probably sensitise the patient while the second appears to produce immunological catastrophe. Then we call

it as Dengue Hemorrhagic Fever (DHF). Mortality will be high if not properly attended to. Chikungunya fever lasts two to seven days while accompanying joint pains lasts for weeks, months and in some cases for years. Mortality is a rarest of rare and occurs only in the elderly or those with underlying chronic medical problems most likely having severe complications.

The recently heard pandemic of Zika virus in news is actually first isolated in 1947 from the Zika Forest of Uganda and hence the name. The illness it causes is similar to a mild form of dengue fever, is treated by rest but cannot be prevented by drugs or vaccine. There is possibility of link between Zika fever and microencephaly (small head and brain damage) in newborn babies by mother to child transmission. Hence some countries like Columbia, Ecuador, Jamaica etc, where there is a large scale outbreak of Zika fever, recommended to avoid pregnancy for 8 months. Developing vaccine against Zika may take years but there is a scope in the case of Dengue as M/S. Sanofi has recently launched first ever vaccine against it with several limitations including the low efficacy against DENV-2 serotypes. However it will definitely be a complementary tool though not a silver bullet. The extended tours and travels in the modern society may ensure the possibility of importing Zika virus to this tiniest union territory in the course of time especially when mosquito control measures are grossly inadequate.

Though the mosquito species and the disease they transmit may vary, they have something in common – egg lays in water, larvae and pupae are living in water, duration of the larval cycle is 5 to 7 days etc which makes the control of mosquitoes is not a complex task. The crux of the control of mosquitoes lies in not allowing water to stagnate more than a week and ensuring no mosquito is laying eggs in the water. Cleaning campaign of any type including the newly introduced "Swaach Bharath" if taken up in this perspective will definitely reduce the density of mosquitoes. The reason being major breeding sources of mosquitoes in the Islands like empty rat bitten coconut shells, indiscriminately thrown plastic bags, unused tyres, etc are properly disposed in such campaigns.

Consequent on devolution of functions and functionaries to District

Panchayat during the year 2012, various public health programmes including mosquito control is shifted under PRIs. Unfortunately Panchayat could not take up the issue uninterruptedly due to lack of funds and manpower. When they are taking up the control programmes, the vector density is diminishing considerably but vectors are flaring up once they give up. There lies the importance of uninterrupted control programme.

It will be a delectable endeavour to ask every school children from 1 Std to +2 Std to bring one empty coconut shells a day for a week. The empty coconut shells so obtained can be disposed either by burning or depositing in a dig or by any other method deemed fit. In Lakshadweep approximately 13000 students are available. Hence within a week $13000 \times 1 \times 7 = 91000$ coconut shells, a predominant breeding sources of mosquitoes in Lakshadweep Islands, can be eliminated even without incurring any expenditure from the exchequer. So as the case with any other breeding sources except the stagnated pools, abandoned wells, uncovered ponds, leaking septic tanks, unmaintained rain harvesting tanks etc. These sources could be treated with minimum use of appropriate larvicides. A dry day in a week can be observed in each schools and government offices ensuring that no mosquito is breeding in their premises on that particular day. This will break the larval life cycle of mosquitoes.

Attitude of the people is the key to make any programme of this kind a success. My personal experience during the first mega campaign of "Swaach Bharath" at Kavaratti was the reluctance of a household to lend a matchbox to burn the waste as if it is the specific duty of the government employees to clean their private land. After the implementation of "Swaach Bharath" the Island community is waiting the government employees or Panchayat labourers to clean in and around their households. This outlook of the people should change and the mosquito control should be taken as his or her own responsibility for which we should prepare them through various awareness (IEC/BCC) programmes.

IEC/BCC activities are crucial in sensitization and participation of the community. People need to be educated about the disease, mode of transmission, adoption of control measures, their role,

dos and don'ts, and availability of treatment. People should be encouraged to use personal protection measures like using full sleeved clothes, use of mosquito repellent and bed nets even during day times at least during an outbreak as the Dengue, chikungunya and Zika vector is a day biter. Special campaigns may be carried out especially prior to onset of monsoon utilizing mass media and public announcement through vernacular language. Posters, hoardings etc will also help. NCC, Scouts and NSS in schools and faith based organisations like SSF, SKSSF etc in Islands apart from NGOs may also be deployed.

Accredited Social Health Activist (ASHA), a performance linked incentive worker remain in the lowest step in the ladder of health care delivery system. In Lakshadweep each ward in every Island has one ASHA and a total of 102 ASHAs in position now. They are the grass root level connecting link between the health care delivery system and community. They are now adequately trained after their induction into the Health Care Delivery System under National Health Mission. Number of persons per ASHAs ranges from 200 to 500 in the Islands. A basic handy training on vector control programme including practical demonstration has already been imparted last year along with their recommended training module. Hence ASHAs can be very well utilized by providing desirable incentives for domiciliary visits in every week. This weekly visits not only ensure awareness among the households but also will corroborate the larval life cycle of mosquito. ASHAs visit will definitely reduce man-vector contact in the long run.

Recent discussions in the Islands are about super speciality infrastructural facilities, Night evacuation arrangement, availability of sophisticated equipments to diagnose and treat the diseases, branded medicines etc. I do agree that these are all essential requirements. But in the course of time we have easily forgotten that prevention of all the diseases are possible to a great extent and evacuations can be reduced to bare minimum if a concerted efforts and timely action is put in place to further strengthen the public health system in Lakshadweep Islands.

കേന്ദ്ര ആഭ്യന്തര മന്ത്രിയുടെ വനിതാ ദിനാശംസകൾ

അന്താരാഷ്ട്ര വനിതാ ദിനത്തോടനുബന്ധിച്ച് കേന്ദ്ര ആഭ്യന്തര മന്ത്രി ശ്രീ രാജ്നാഥ് സിങ് ഏവർക്കും ആശംസകൾ നേർന്നു. വനിതാ സുരക്ഷ, ലിംഗ സമത്വം, വനിതാ ശാക്തീകരണം എന്നീ മേഖലകളിൽ നാം കൈവരിച്ച നാഴികക്കല്ലുകൾ ആഘോഷിക്കുന്ന വേളയാണ് അന്താരാഷ്ട്ര വനിതാ ദിനമെന്ന് രാജ്നാഥ് സിങ് സന്ദേശത്തിൽ പറഞ്ഞു. വനിതകൾക്കെതിരെ നടക്കുന്ന കുറ്റകൃത്യങ്ങളെ ഗവൺമെന്റ് ഗൗരവത്തിലേടുക്കുന്നതായും കുറ്റകൃത്യങ്ങൾ തടയാൻ നിയമ, സർക്കാർ സംവിധാനങ്ങൾ ഗവൺമെന്റ് ശക്തിപ്പെടുത്തിയിട്ടുണ്ടെന്നും കേന്ദ്ര മന്ത്രി പറഞ്ഞു. അടിയന്തര ഘട്ടങ്ങളിൽ സ്ത്രീകൾക്ക് സഹായത്തിനായി രാജ്യമെമ്പാടും നാഷണൽ എമർജൻസി റെസ്പോൺസ് സിസ്റ്റം സ്ഥാപിക്കുന്നതിനുള്ള നടപടികൾ ആരംഭിച്ചതായും കേന്ദ്ര ആഭ്യന്തര മന്ത്രാലയത്തിന്റെ 112 എന്ന നമ്പറിൽ വിളിച്ച അടിയന്തര സഹായം ആവശ്യപ്പെടാവുന്നതാണെന്നും രാജ്നാഥ് സിങ് പറഞ്ഞു. വനിതകളെ ശാക്തീകരിക്കുന്നതിനും സുരക്ഷിതമായ ചുറ്റുപാടുകൾ

ഒരുക്കി നൽകുന്നതിനും സുരക്ഷിതമായ ചുറ്റുപാടുകൾ ഒരുക്കി നൽകുന്നതിനും രാഷ്ട്രം പ്രതിജ്ഞാ ബദ്ധമാണെന്ന് അദ്ദേഹം വ്യക്തമാക്കി. **സംയോജിത ആരോഗ്യ വിവരസംവിധാനം ന്യൂഡൽഹി :** രാജ്യത്ത് ആരോഗ്യ സംബന്ധിയായ വിവരങ്ങൾ ഉൾക്കൊള്ളിച്ചു കൊണ്ടുള്ള സമഗ്ര സംവിധാനം വികസിപ്പിക്കുന്നതിനായി ഒരു ഇ-സ്ഥാപനം ആരംഭിക്കുന്ന കാര്യം പരിഗണനയിലാണെന്ന് കേന്ദ്ര ആരോഗ്യ മന്ത്രി ജെ. പി. നദ്ദ അറിയിച്ചു. കേന്ദ്ര ആരോഗ്യ മന്ത്രാലയത്തിന് കീഴിൽ ഇതിനായി നാഷണൽ സെന്റർ ഫോർ ഹെൽത്ത് ഇൻഫർമേഷൻ (എൻ.സി.എച്ച്.ഐ.)-ന് രൂപം നൽകി വരികയാണെന്ന് ലോകസഭയിൽ രേഖാമൂലം നൽകിയ മറുപടിയിൽ അദ്ദേഹം സൊസൈറ്റീസ് രജിസ്ട്രേഷൻ നിയമത്തിനു കീഴിലായിരിക്കും നിർദ്ദിഷ്ട സ്ഥാപനം രജിസ്റ്റർ ചെയ്യുക.
